- Surrogacy.

LIMITED RANGE OF FERTILITY TREATMENTS

IVF treatment, ICSI, Frozen Embryo Transfer (FET).
No Donor Programs available.

! FACT

2/3 of City Fertility Centre patients are helped with fertility treatments that **DO NOT require IVF**

IVF TREATMENT

CUSTOMISED IVF CYCLES

IVF cycles tailored to suit patients according to the different levels of treatment required.

Ovarian Stimulation: FULLY STIMULATED CYCLE. The dose and combination of medications is adjusted to the patients' individual response to get the best outcome.

We aim to pick up 10 - 12 eggs to increase the chance of a successful pregnancy and allow excess embryos to be frozen for future use.

Embryo transfer: Day 2 - 3, and Day 5 or Day 6 Blastocyst Stage Extended Culture available.

MILD STIMULATED IVF CYCLES

Ovarian Stimulation: MILD STIMULATED CYCLE.

The dose of hormone preparation is fewer and lower, which means that the resulting number of follicles containing the eggs is reduced. Therefore, potentially increasing the chances that you will need more than one IVF cycle to achieve a pregnancy.

FEES

HIGHER OUT-OF-POCKET EXPENSE

Discount clinics use a mild stimulated cycle which means that the resulting number of eggs is reduced. Therefore, you may need more cycles to achieve a pregnancy and this will increase your cost.

The difference in out-of-pocket expenses for undergoing a **NUMBER OF 'Mild Stimulated Cycles'**, compared to **ONE 'Fully Stimulated Cycle' of IVF and subsequent Frozen Embryo Transfer (FET)** with City Fertility Centre, is minimal.

LOWER OUT-OF-POCKET EXPENSE
